

JENIFER

Data Analyst | Python • SQL • Power BI • Tableau

Chennai, Tamil Nadu | +91-7094988999 | jeniferjothid@gmail.com | linkedin.com/in/jenifer-data-analyst

PROFESSIONAL SUMMARY

Aspiring Data Analyst with practical experience in SQL, Python, Power BI and data visualization gained through internships and projects. Strong foundation in data analysis, reporting and problem-solving, with a keen interest in turning data into actionable insights. Seeking an opportunity to leverage technical and analytical skills to deliver value-driven business solutions.

TECHNICAL SKILLS

Languages	Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), SQL
Databases	MySQL, PostgreSQL — Joins, Aggregations, Subqueries, Window Functions
Visualization	Power BI (DAX, Data Modeling, Dashboard Development), Tableau, Matplotlib, Seaborn
Tools	Microsoft Excel (Pivot Tables, VLOOKUP, Power Query)
Soft Skills	Analytical Thinking, Problem Solving, Attention to Detail

WORK EXPERIENCE

- B-Accuracy ERP Software** | *Data Analyst Intern* Apr 2025 (1 Month)
 - Conducted end-to-end data cleaning and preprocessing on ERP datasets, improving data quality for KPI reporting and executive dashboards.
 - Analyzed business metrics (sales, inventory, operations) and delivered actionable insights that supported data-driven strategies for management.
 - Built and maintained reporting templates using ERP analytics tools, reducing manual reporting effort and improving turnaround time.
 - Collaborated with cross-functional teams to define KPIs and translate business requirements into quantifiable metrics.
- B-Accuracy ERP Software** | *Data Analyst Intern (Demand Forecasting Project)* Nov 2025 – Jan 2026 (3 Months)
 - Engineered a demand forecasting pipeline using Random Forest and ARIMA on 50,000+ sales records, achieving 91% prediction accuracy.
 - Performed comprehensive EDA and feature engineering to identify seasonal trends, demand patterns and key drivers of sales volatility.
 - Automated inventory reorder logic, reducing overstock by 22% and stockouts by 35%, directly improving supply chain efficiency.
 - Designed an end-to-end Python–MySQL data pipeline for automated data ingestion, transformation and storage.

PROJECTS

ML-Based Demand Forecasting & Inventory Control System

Python | Pandas | Scikit-learn | ARIMA | Random Forest | MySQL

- ▮ Engineered a demand forecasting pipeline using Random Forest and ARIMA on 50,000+ sales records, achieving 91% prediction accuracy.
- ▮ Performed comprehensive EDA and feature engineering to identify seasonal trends, demand patterns and key drivers of sales volatility.
- ▮ Automated inventory reorder logic, reducing overstock by 22% and stockouts by 35%, directly improving supply chain efficiency.
- ▮ Designed an end-to-end Python–MySQL data pipeline for automated data ingestion, transformation and storage.

E-Commerce Sales & Customer Analysis Dashboard

Power BI | DAX | Power Query | SQL | Excel

- ▮ Built an interactive Power BI dashboard analyzing 10,000+ e-commerce transactions to track sales, profit, customer behavior and product performance.
- ▮ Developed a star schema data model and created DAX measures for Total Sales, Profit Margin, Customer Count and Sales Growth.
- ▮ Designed dynamic dashboards with drill-through, slicers, bookmarks and KPI cards for business performance monitoring.
- ▮ Performed customer segmentation and product analysis to identify high value customers and top-performing categories.
- ▮ Automated reporting workflows and delivered actionable insights through interactive visualizations.

Customer Churn Prediction & Retention Analytics System

Python | SQL | Scikit-learn | Random Forest | XGBoost | Power BI | Flask

- ▮ Analyzed 7,000+ telecom customer records using Python and SQL to identify behavioral patterns and key churn factors including contract type, tenure, monthly charges and service usage.
- ▮ Built and compared ML classification models (Logistic Regression, Random Forest, XGBoost), achieving 87% accuracy with XGBoost after SMOTE-based class balancing and hyperparameter tuning.
- ▮ Created an interactive Power BI dashboard highlighting at-risk customer segments with filters by region, contract type and churn probability score for real time business monitoring.
- ▮ Generated data-driven retention strategies by identifying high risk profiles and recommending targeted actions such as contract upgrades, loyalty discounts and personalized outreach.

EDUCATION

Master of Science – Data Science

Women's Christian College, Chennai

2026 | 80%

Bachelor of Science – Computer Science

Bishop Heber College, Trichy

2024 | 78%

CERTIFICATIONS

- ▮ **Python with NumPy (Coursera)** - Array operations, mathematical computations, data manipulation and numerical analysis for data science applications.
- ▮ **Data Visualization with Power BI (Coursera)** - Interactive dashboards, data modeling, DAX measures and business intelligence reporting.
